

Quarterly Attrition and Turnover Analysis

Apex Manufacturing Partners • Q2 2026

MEMORANDUM: Q2 2026 WORKFORCE TURNOVER ANALYSIS

To: Executive Leadership Team

From: HR Analytics & Workforce Planning

Date: August 18, 2026

Subject: Q2 Voluntary and Involuntary Attrition Trends

Executive Summary:

During the second quarter of 2026, Apex Manufacturing Partners experienced an annualized voluntary attrition rate of 14.2%, representing a 2.8 percentage point increase compared to Q1 2026 (11.4%). Involuntary turnover remained stable at 3.1%. The total headcount at the end of Q2 stood at 1,850 regular full-time employees.

Key Attrition Drivers:

- Early-Tenure Flight Risk:** 42% of all voluntary resignations occurred within the employee's first 180 days of employment. Exit survey data highlights a gap between candidate expectations set during recruitment and actual job responsibilities on the assembly line floor.
- Regional Compensation Discrepancies:** Exit interviews in our Midwest Distribution Hub revealed that 65% of departing logistics specialists cited higher base wages offered by competing local fulfillment centers as their primary reason for leaving.

Impact on Operational Overhead:

The cost to replace departing personnel in Q2, including recruitment advertising, overtime paid to cover vacant shifts, and lost productivity during onboarding, is estimated at \$1.25 million.

Strategic Recommendations:

- **Onboarding Overhaul:** Implement a 90-day structured mentorship program for all new production floor hires to improve early-tenure engagement.
- **Wage Calibration:** Conduct an immediate out-of-cycle market compensation review for logistics roles in the Midwest region to restore competitive positioning.
