

Confidential Exit Interview Summary

Horizon Medical Devices • August 18, 2026

CONFIDENTIAL EXIT INTERVIEW RECORD

Employee Name: Daniel Cho

Department: Product Design

Job Title: Senior Industrial Designer

Tenure: 4 Years, 2 Months

Separation Date: August 21, 2026

Type of Separation: Voluntary Resignation

Interviewer: Melissa Grant, HR Director

Primary Reasons for Leaving:

During the interview, Daniel cited limited upward mobility and compensation as the primary drivers for his resignation. He noted that despite receiving consistently high performance ratings, the pathway to a Lead or Principal Designer role was unclear due to low turnover at the senior management level. He has accepted an offer with a direct competitor that provides a 22% increase in base salary and a clear track to a Director title.

Feedback on Management and Culture:

Daniel spoke highly of his immediate supervisor, noting that she was supportive of his creative initiatives and provided excellent mentorship. However, he expressed frustration with the broader departmental matrix structure. He felt that executive leadership's frequent pivots on product roadmaps led to significant burnout and mandatory overtime for the design team over the last three quarters.

Company Benefits and Total Rewards:

The employee rated the company's healthcare and 401(k) benefits as "Excellent" and "Above Industry Standard." However, he strongly suggested that Horizon Medical Devices implement a more flexible work-from-home policy. The current mandate of four days in-office per week was cited as a major detractor for employee morale.

Recommendations for the Company:

1. Establish transparent, documented career ladders for the industrial design track, outlining the specific competencies required for promotion to Lead Designer.
2. Re-evaluate the remote work policy to offer at least two permanent remote days per week to align with tech-industry norms and improve retention.

HR Action Items:

- Review compensation bands for Senior Industrial Designers against current 2026 market benchmarks.
- Share anonymized feedback regarding the matrix structure burnout with the VP of Product Design.
