

Workstation Ergonomic Evaluation

Vertex Health Solutions • August 18, 2026

WORKSTATION ERGONOMIC EVALUATION REPORT

Employee: Brian Caldwell

Location: Remote Home Office (Chicago, IL)

Evaluator: Dr. Allison Vance, Certified Professional Ergonomist (CPE)

Date of Evaluation: August 14, 2026

Date of Report: August 18, 2026

Reason for Assessment:

The employee submitted an ergonomic assessment request via the HR portal citing chronic cervical spine (neck) stiffness and intermittent numbness in the right wrist after working shifts longer than 6 hours.

Observations and Postural Risk Factors:

A virtual assessment was conducted via a 45-minute video conference. The following risk factors were identified in the employee's current home office setup:

- Monitor Height:** The employee is using a single 15-inch laptop screen placed flat on a standard dining table. This forces a constant downward viewing angle of approximately 35 degrees, causing significant cervical flexion and strain.
- Seating:** The employee is utilizing a rigid dining chair with no lumbar support. The seat depth is insufficient, leading to poor lower back posture.
- Desk Height/Keyboard Placement:** The dining table is 31 inches high (above the standard 28-29 inch ergonomic desk height). Consequently, the employee's elbows are angled downward at 110 degrees, resting heavily on the hard edge of the table, causing ulnar nerve compression.

Recommendations & Equipment Requisitions:

To mitigate the identified musculoskeletal risks, HR Facilities is authorized to procure the following equipment against the employee's home-office stipend budget:

- 1x Fully Adjustable Ergonomic Task Chair with lumbar support and 4D armrests (Est. \$350).
- 1x Laptop riser stand to elevate the screen to eye level (Est. \$45).
- 1x External wireless ergonomic split keyboard and vertical mouse combo to relieve wrist pronation (Est. \$120).

Follow-Up:

The employee has been instructed on the 20-20-20 rule (look 20 feet away, for 20 seconds, every 20 minutes) and provided with a pamphlet of desk stretching exercises. A follow-up check-in will be scheduled for September 30, 2026, to ensure the new equipment has resolved the reported discomfort.
